

Blanco Remote Profiler

Blanco - Remote Profiler is server software, which is installed to the server for capturing reliable workstation asset information about all the hardware components and selected software products/installations. It gathers information about the technical configurations of workstations and sends this information by https to a defined database.

Key Features

- Profiles all computers in an organization's network
- Centralised management and reporting
- Detailed Hardware Asset Management report information (i.e. processor, memory, hard drive etc)
- XML reporting
- Possibility to send inventory reports to the server
- User-friendly graphical user interface
- No client installations needed
- Lists MS Windows and MS Office serial numbers

Value-added benefits

- Provides detailed information on:
 - All software found in Windows registry
 - BIOS
 - Memory
 - Motherboard
 - Date, time, person, computer name, domain name etc.
 - Processor
 - Hard disk
 - Optical / floppy drive
 - Storage / display adapter
 - Network card
 - Vendor, product name, MAC address, IP-address
 - Modem / Audio / Other hardware
 - Installed software

System Requirements

- Windows XP, 2000, ME or 98
- Hardware requirements for running a Microsoft operating system
- Remote administration allowed in client machines/PCs
